

DIAPHRAGM WALLS

Since its take-over by Jan De Nul Group, Soiltech's machinery has been significantly extended with a focus on the installation of diaphragm walls. Soiltech can install diaphragm walls up to depths of over 40 metres.

Diaphragm wall experts of the Soiltech team successfully completed the first projects. Since then, Soiltech is continuously executing diaphragm wall projects. Successful realisations in this field include a tunnel project in Aalst, a lock project in the Netherlands and preparatory works for the Oosterweel link in Antwerp.
